Jaw Crushers and Disk Mills - classic line

IDEAL FOR
PRE-, FINE- AND ULTRA-FINE-GRINDING OF HARD AND BRITTLE MATERIALS IN THE AREAS
- GLASS AND CERAMICS INDUSTRY
- MINING AND METALLURGY
- GEOLOGY AND MINERALOGY
- CHEMICAL INDUSTRY
- SOIL RESEARCH

JAW CRUSHERS
DISK MILLS
FRITSCH is an internationally respected manufacturer of application-oriented laboratory instruments. For more than 80 years, laboratories worldwide have relied on our experience, quality, service and innovation - for fast industrial applications as well as for especially accurate results in control- and research laboratories.

See for yourself.
FAST COMMUNICATION OF HARD AND BRITTLE MATERIALS

The compact pre-crusher

FRITSCH Jaw Crusher PULVERISETTE 1 ...................................................... 4–7
Ideal as the classic workhorse for pre-crushing of brittle materials in the areas of mining and metallurgy, chemistry, geology and mineralogy, glass industry, ceramics industry, rocks and soils.

High final fineness for large quantities

FRITSCH Disk Mill PULVERISETTE 13 ....................................................... 8–11
Particularly ideal for medium particle sizes in the areas of mining and metallurgy, glass industry, ceramics industry, soil research, rocks and soils.

Powerful combination – pre- and fine-crushing in a single step

FRITSCH Jaw Crusher PULVERISETTE 1 and Disk Mill PULVERISETTE 13 .......................................................... 12–13
Ideal for fast, continuous pre- and fine-grinding of large quantities, including coarse materials, down to analytical fineness in the areas of mining and metallurgy, chemistry, geology and mineralogy, glass industry, ceramics industry, soil research, rocks and soils.

Extremely short grinding time thanks to FRITSCH technology

FRITSCH Vibrating Cup Mill PULVERISETTE 9 ............................................ 14–17
Ideal for fast sample preparation, such as in the areas of spectroscopy preparation, ore and geology laboratories, mining and metallurgy, ceramics industry, agriculture and environmental science, infrared and x-ray fluorescence analysis.

Preparation of solid and high-quality pellets

FRITSCH Pellet Press ..................................................................................... 18
Manual hydraulic Pellet Press for the preparation of pellets with a smooth, homogeneous surface for spectral analyses such as X-ray fluorescence analysis or infrared spectroscopy for elementary analysis.

Pellet Press: for the preparation of pellets in a diameter of 32 or 40 mm with a pressure force of up to 250 kN
THE COMPACT PRE-CRUSHER

• Very fast, uniform comminution
• Feed size up to 95 mm, final fineness 1–15 mm
• Extremely fast and easy cleaning
• Extremely robust even for very hard materials
• Especially simple crushing jaw removal
• Safe and dust-free operation
• Adaptable crushing jaw kinematics for higher final fineness

The compact FRITSCH Jaw Crusher PULVERISETTE 1 classic line is the ideal instrument for fast and effective pre-crushing of hard and very hard brittle materials – even ferrous alloys are no problem for this instrument! Choose according to your tasks: two different models for various feed sizes and sample quantities are available.

The powerful comminution of the sample takes place in the Jaw Crusher under high pressure between one fixed and one movable crushing jaw in an enclosed grinding chamber. The final fineness is easily set from the outside with the 10-stage adjustable gap width between the crushing jaws. The ground sample automatically falls downward – into a drawer for batchwise comminution or via a chute into a larger collection container for continuous operation or directly into a FRITSCH Disk Mill PULVERISETTE 13 classic line for further comminution.

Saves time and energy: The specially simple crushing jaw removal takes only seconds and requires only two hand motions to ensure particularly simple cleaning – fast and thorough.

The especially simple cleaning of the FRITSCH Jaw Crusher PULVERISETTE 1 classic line saves time and offers effective contamination protection for your samples.
The funnel of the FRITSCH Jaw Crusher PULVERISETTE 1 classic line is particularly accessible, quickly and easily filled even with larger sample quantities and easy to clean. Its design enables the crushed material to be automatically conveyed into the crushing chamber – blockages are practically impossible.

A practical plexiglas cover for optical inspection of optimum material flow.

For simple and fast releasing of the fixed crushing jaw. The crushing jaw can be removed for cleaning quickly and easily with just 2 hand motions.

Gap width adjustment for setting the distance between the crushing jaws – and therefore setting the final fineness.

The kinematics – in other words, the movement between the movable and fixed crushing jaws – of the FRITSCH Jaw Crusher PULVERISETTE 1 classic line can be easily adapted to the breaking characteristics of the respective sample: Select the upward and downward movement of the movable crushing jaw relative to the fixed one in order to receive a sample in a narrow particle size range. For a fast comminution, please select the nearly circular motion.

The practical collecting vessel for batchwise comminution is particularly easy to remove.

Especially safe and dust-free: The enclosed grinding chamber prevents users from reaching inside and ensures a safe and dust-free operation of all moving parts. An integrated connection makes it very simple to combine the instrument with a dust exhaust system for automatic removal of the fine dust arising during grinding. The dust exhaust system is also very useful when cleaning the grinding parts.
Double the service life of your crushing jaws – they can be easily turned around on the FRITSCH Jaw Crusher PULVERISETTE 1 classic line.

Select the right material combination!

The crushing jaws and lateral support walls of the FRITSCH Jaw Crusher PULVERISETTE 1 classic line are available in 6 different materials in order to avoid undesired contamination due to material abrasion. The standard version is equipped with fixed and movable crushing jaws as well as lateral support walls made of tempered steel.

Normally, crushing jaws and support walls of the same material are used. Since the lateral support walls are subject to low stresses, however, the standard lateral support walls made of tempered steel can often be retained.

RoHS (Restriction of the use of certain hazardous substances)

For the comminution of RoHS samples – such as for the XRF analysis – crushing jaws and support walls made of chromium-free steel are particularly well suited.

Iron-free pre-crushing

For completely iron-free pre-crushing of medium-hard brittle samples, for example in the ceramics industry, we can equip your FRITSCH Jaw Crusher PULVERISETTE 1 classic line with crushing jaws made of zirconium oxide, lateral support walls in zirconium oxide or aluminium, and with a special PVC funnel. So you will have absolute protection against iron contamination, such as for dental ceramics.

Steel crushing jaws with a grooved surface

If required, we can equip your PULVERISETTE 1 classic line, model II, with fixed and movable crushing jaws in steel with a grooved surface, which have a different influence on particle shape and particle size distribution.
**Iron-Free Grinding**

For iron-free grinding, use the practical PVC funnel.

**Technical Data**

**Electrical Details**
- Model I, 400 V/3~, 50-60 Hz, 1450 watt
- Model I, 230 V/1~, 50-60 Hz, 1570 watt
- Model I, 115 V/1~, 50-60 Hz, 1910 watt
- Model II, 400 V/3~, 50-60 Hz, 2780 watt

**Motor shaft power in accordance with VDE 0530, EN 60034**
- Model I, 1.1 kW
- Model II, 2.2 kW

**Weight**
- Model I, net 177 kg, gross 202 kg
- Model II, net 205 kg, gross 230 kg

**Dimensions w x d x h**
- Model I and model II, bench top instrument 40 x 80 x 80 cm
- Packaging w x d x h
  - Model I and model II, wooden case 90 x 75 x 90 cm

**Emissions value of workplace according to DIN EN ISO 3746:2005**
- Approx. 85 dB(A) (depending on the material to be crushed)

**Order no.**
- 400 V/3~
  - Model I: 01.5030.00
  - Model II: 01.7030.00
- 230 V/1~
  - Model I: 01.5020.00
  - Model II: 01.7020.00
- 115 V/1~
  - Model I: 01.5010.00
  - Model II: 01.7010.00

**Application Examples**

**Mining and Metallurgy**
- Niobium-titanium, ferrovanadium, chrome vanadium, tungsten carbide, ores, coal, slag, coke

**Chemistry**
- Wide variety of various raw materials

**Geology and Mineralogy**
- Granite, basalt, barite, silicates and other rocks

**Glass Industry**
- Frits, glass, raw materials

**Ceramics Industry**
- Dental ceramics, steatite, fire-clay, sintered ceramics, electrotechnical porcelain

**Rocks and Soils**
- Bauxite, clinker, quartz, concrete

PULVERISETTE 13 classic line

HIGH FINAL FINENESS FOR LARGE QUANTITIES

• High throughput up to 150 kg/h
• Fine grinding down to 0.1 mm
• Fast, easy cleaning
• Simple operation
• Fast grinding disk change
• Precision setting of the final fineness even during grinding
• High service life due to generously dimensioned bearings

The especially heavy and solid FRITSCH Disk Mill PULVERISETTE 13 classic line is the ideal instrument for fine grinding of up to 150 kg per hour of hard-brittle and medium-hard solids – even in continuous operation. The maximum feed size per piece is approximately 20 mm edge length, the final fineness is freely adjustable between 12 mm and 0.1 mm.

The material to be ground is comminuted by pressure and shearing action between two counteracting grinding disks with coarse interlocking teeth. The ground material automatically falls down through an output gap into the collection drawer. The desired final fineness can be defined from the outside by changing the gap width.

Especially time saving: The grinding chamber can be completely opened which makes cleaning especially simple and the grinding disks are very easily accessible for changing.
Especially accurate: The precision sliding table of the FRITSCH Disk Mill PULVERISETTE 13 classic line for precise gap setting with an accuracy of 0.1 mm – for rapid, precise operation and exactly reproducible grinding results.

Especially convenient: Easy gap width check from the outside (e.g. with thickness gauge)

- Especially solid: The thick-walled housing of the FRITSCH PULVERISETTE 13 classic line consists of recyclable grey cast iron.
- Especially clean: The connecting piece (optional) for a dust exhaust system really simplifies the automatic removal of fine dust occurring during grinding and is even an optimal aid for cleaning the grinding parts.

Especially safe: The centrally located tension lock of the grinding chamber
Select the appropriate grinding disks

For every FRITSCH Disk Mill PULVERISETTE 13 classic line, you need at least one fixed and one movable grinding disk, which are available in various materials. Normally, two grinding disks of the same material are selected, which must always be harder than the sample to be ground.

* At www.fritsch.de, you can find the corresponding element analyses with detailed information about the materials.

1 Grindng disks of zirconium oxide are only suitable for grinding ceramic materials, minerals, etc. and never for hard-tough samples, such as metals.

High final fineness in minimum time

With the FRITSCH PULVERISETTE 13 classic line, you can achieve high final finenesses in a very short grinding time. We have listed some examples here – always in reference to 1 kg feed quantity and 20 mm particle size and arranged by material types from hard to medium-hard.

**FACTS AND ADVANTAGES**

- **Working principle**: Shearing
- **Bearings**: Needle and double row angular contact ball bearings
- **Equipment**: Instrument without grinding disks
- **Optimal for material type**: Hard-brittle, medium-hard
- **Max. feed size (depending on the material)**: 20 mm
- **Min. sample quantity**: 20 – 30 ml
- **Max. throughput (depending on the material)**: 150 kg/h
- **Final fineness**: 0.1 - 12 mm
- **Feeding**: Batchwise/continuous
- **Grinding parts**: Fixed and movable grinding disks
- **Rotating speed of the grinding disk**: 440 rpm
- **Conformity**: CE mark
- **Guarantee**: 2 years

**APPLICATION EXAMPLES**

- **Mining and metallurgy**: Ores, coal, coke, slags
- **Ceramics industry**: Steatite, sintered ceramics, electrotechnical porcelain, fire-proof clay, dental ceramics
- **Rocks and soils**: Bauxite, slags, quartz, clinker, gypsum, chalk
- **Glass industry**: Frits, different glass types, raw materials
- **Soil research**: Dried soil samples, sewage sludge, hydrological sediments, drilling cores

**IRON-FREE GRINDING**

For completely iron-free grinding of hard-brittle and medium-hard solid samples, for example for dental ceramics, we can equip your FRITSCH Disk Mill PULVERISERETTE 13 classic line with a thorough polymer interior coating – together with grinding disks made of zirconium oxide – an absolutely reliable protection against iron contamination.
For fast, continuous pre- and fine-grinding particularly of large quantities of coarse material, the combination of the FRITSCH Jaw Crusher PULVERISETTE 1 classic line and the FRITSCH Disk Mill PULVERISETTE 13 classic line is the ideal solution. Mounted together onto a rack and connected to each other by a chute, they automatically grind the material from a particle size of up to 95 mm to a final fineness of down to 100 µm – fast, easy and effective in a single step!

Select the appropriate grinding parts and the desired configuration from the options available for the PULVERISETTE 1 and 13 classic line on pages 6–7 and 10–11.
**IRON-FREE PRE- AND FINE-GRINDING**

The FRITSCH-Combination is also available for completely iron-free pre- and fine-grinding. Details can be found on page 6.

A connection chute automatically conveys the pre-crushed material onward for fine grinding.

The new, completely modified FRITSCH Vibrating Cup Mill PULVERISETTE 9 offers many practical advantages in all areas in which hard, brittle and fibrous material must be ground extremely quick down to analytical fineness. Now with increased grinding power and a completely new drive concept, even safer and easier to tension the grinding set, especially quiet, simple to operate and quick to clean.

**Easy working**
No similar mill offers a more convenient operation: The working position is ergonomically optimised; the ease of cleaning is without match. The grinding sets are especially light, and do not have to be placed directly on the vibrating plate in the centre of the mill. The grinding set is simply placed on the guide rail and easily moved to the final position. This protects your back and saves energy and time. The grinding set is tensioned in seconds using a well-thought out one-hand lever.

**Simply clever!**

**STRONGER, FASTER, BETTER**

- More power with new drive concept
- Extra-fast grinding with up to 1500 rpm
- Precise adjustment of rotational speed, grinding time and pause periods
- Programming and storage of grinding cycles
- Self-explanatory multilingual menu navigation
- Optimised tensioning of grinding set with anti-rotation lock
- Especially safe hood locking
- Complete soundproof lining

**Especially light:** The grinding sets of the new PULVERISETTE 9 are now considerably lighter and are equipped with heat-insulated handles.
Especially well-arranged: The self-explanatory, multilingual menu navigation on the LCD display for setting the grinding time precisely to the second, the pause periods and the rotational speed as well as the programming and storage of grinding cycles.

Especially intelligent: A special detector automatically detects when you use an agate grinding set for grinding and reduces the rotational speed independently.

Especially safe: Tensioned in seconds with one hand and one grip, the completely new rapid and anti-twist tensioning for the grinding set.

Especially ergonomic: The PULVERISETTE 9 grinding sets, which have been considerably reduced in weight, are placed at an optimised working height on a practical guide rail and then easily moved to the final position.
Select the appropriate grinding set

Grinding sets in 5 different materials and 3 different sizes from 50 ml to 250 ml volume are available for the FRITSCH PULVERISETTE 9 – for each application the suitable one!

Optimises your grinding process: the FRITSCH-motor with torque-optimised frequency converter

In the Vibrating Cup Mill, the grinding is performed by horizontal circular oscillations of the grinding set on a vibrating plate. The grinding set consisting of ring and puck comminute the grinding sample with extremely high pressure, impact forces and friction. In this form of grinding, the transmission of forces onto the grinding sample is much more important than the pure motor power. For this reason, FRITSCH as the first provider worldwide, developed for the PULVERISETTE 9 a special motor and now equipped it with an especially interference-resistant, torque-optimised frequency converter which fulfils all the relevant safety standards worldwide. It ensures that the motor output is precisely matched to the grinding material and grinding set - which optimises the energy consumption.

Our Suggestion

Grinding sets with high density, e.g. tempered steel or tungsten carbide, reduce the grinding time.
How to go mobile with the Vibrating Cup Mill: On request, we can supply the PULVERISETTE 9 on heavy duty wheels with arresting brake.

**APPLICATION EXAMPLES**

- **Mining**: For processing coal, ores or minerals for physical or chemical analysis
- **Metallurgy**: For grinding blast furnace slag or cast iron samples to determine additives
- **Ceramics industry**: For grinding rock samples to produce raw powder to determine $\text{CaCO}_3$- and $\text{MgO}$-content or clinkers to study the constancy of the mineralogical structure
- **Agriculture and environment**: For preparing samples for chemical analysis of soils, sludges or vegetable samples
- **Infrared and X-ray fluorescence analysis**: For preparing samples in a short grinding time without contamination due to undesired abrasion.

**TECHNICAL DATA**

**Electrical Details**

- 230-240 V/1~, 50-60 Hz, 1200 watt
- 100-120 V/1~, 50-60 Hz, 1200 watt

**Motor shaft power in accordance with VDE 0530, EN 60034**

- 1.1 kW

**Weight**

- Net 267 kg
- Gross 330 kg

**Dimensions w x d x h**

- Floor instrument 77 x 76 x 116 cm
- Pallet box 82 x 88 x 147 cm

**Emissions value of workplace according to DIN EN ISO 3746:2005**

- Approx. 74 dB(A) (depending on the material to be ground and grinding set)

**Order no.**

- 230-240 V/1-: 09.5000.00
- 100-120 V/1-: 09.5001.00

Pressure elements automatically lift the grinding set, the anti-rotation lock tensions them absolutely safe and the safety switch checks the firm position.
**PELLET PRESS**

**Ideal for high-quality pellets**
- Pressing tools: 40 mm diameter included, 32 mm diameter optional
- Variable pressure force up to 250 kN
- Clearly designed pressure force display in 10 kN steps
- Simple operation via hand lever
- Easy cleaning
- Single-stage piston stroke of max. 25 mm
- Automatic pressure relief in case of overstress
- Solid and compact with impact-resistant cladding

**Stable and impact-resistant:** The transparent polycarbonate cladding with all-round observation window.

Simple: By pressing the hand lever down, you create a solid, highly permeable pellet for further analysis.

The manually-operated hydraulic FRITSCH Pellet Press is ideal for fast and easy preparation of both: solid and highly permeable pellets of solid samples for X-ray fluorescence analysis or infrared spectroscopy.

The pressure force is variable up to max. 250 kN and is automatically relieved in case of overstress. The pressing tool for pellets with 40 mm diameter is included in delivery, a 32 mm diameter pressing tool is optional.

It’s as easy as this: Fill in the sample, close the magnetically-held door and build-up the desired pressure using the hand lever - that’s it.

If your pellets require binding agents for stabilisation, please contact us and we will be happy to assist.

The PULVERISERETTE 1 with voltage of „/3~“ can only be operated on a three-phase supply network.

Other voltages on request.

- **Crushing jaws for model I**
  - 43.0010.09* Fixed crushing jaw made of tempered steel
  - 43.0020.09* Movable crushing jaw made of tempered steel
  - 43.0030.10 Fixed crushing jaw made of stainless steel
  - 43.0040.10 Movable crushing jaw made of stainless steel
  - 43.0011.09 Fixed crushing jaw made of chromium-free steel
  - 43.0021.09 Movable crushing jaw made of chromium-free steel
  - 43.0130.23 Fixed crushing jaw made of manganese steel
  - 43.0140.23 Movable crushing jaw made of manganese steel
  - 43.0050.08 Fixed crushing jaw made of hardmetal tungsten carbide
  - 43.0060.08 Movable crushing jaw made of hardmetal tungsten carbide
  - 43.0160.27 Fixed crushing jaw made of zirconium oxide
  - 43.0110.27 Movable crushing jaw made of zirconium oxide

- **Lateral support walls for model I**
  - 43.0070.09* 1 pair made of tempered steel
  - 43.0080.10 1 pair made of stainless steel
  - 43.0071.09 1 pair made of chromium-free steel
  - 43.0090.08 1 pair made of hardmetal tungsten carbide
  - 43.0150.13 1 pair made of aluminium
  - 43.0160.27 1 pair made of zirconium oxide

- **Accessories for iron-free pre-crushing for model I**
  - 01.5410.00 Funnel PVC incl. clamping strips

The PULVERISERETTE 1 with voltage of „/3~“ can only be operated on a three-phase supply network.

Other voltages on request.

- **Crushing jaws for model II**
  - 43.3010.09* Fixed crushing jaw made of tempered steel
  - 43.3020.09* Movable crushing jaw made of tempered steel
  - 43.3030.10 Fixed crushing jaw made of stainless steel
  - 43.3040.10 Movable crushing jaw made of stainless steel
  - 43.3011.09 Fixed crushing jaw made of chromium-free steel
  - 43.3021.09 Movable crushing jaw made of chromium-free steel
  - 43.3130.23 Fixed crushing jaw made of manganese steel
  - 43.3140.23 Movable crushing jaw made of manganese steel
  - 43.3050.08 Fixed crushing jaw made of hardmetal tungsten carbide
  - 43.3060.08 Movable crushing jaw made of hardmetal tungsten carbide
  - 43.3160.27 Fixed crushing jaw made of zirconium oxide
  - 43.3110.27 Movable crushing jaw made of zirconium oxide

- **Lateral support walls for model II**
  - 43.3070.09* 1 pair made of tempered steel
  - 43.3080.10 1 pair made of stainless steel
  - 43.3071.09 1 pair made of chromium-free steel
  - 43.3090.08 1 pair made of hardmetal tungsten carbide
  - 43.3150.13 1 pair made of aluminium
  - 43.3160.27 1 pair made of zirconium oxide

- **Accessories for iron-free pre-crushing for model II**
  - 01.7410.00 Funnel PVC incl. clamping strips

* Included in the basic price of the instrument; when ordering a deviating specification from the standard accessories, please specify the exact article number of the replacement part.

**DISK MILL classic line**

**PULVERISSETTE 13**

- Instrument without grinding disks
  - For 400 V/3~, 50-60 Hz, 1830 watt
  - The PULVERISSETTE 13 with voltage of „/3~“ can only be operated on a three-phase supply network.
  - Other voltages on request.

- Grinding disks
  - 13.1100.09 Fixed grinding disk, 200 mm dia., hardened steel cast
  - 13.1110.09 Movable grinding disk, 200 mm dia., hardened steel cast
  - 13.1120.23 Fixed grinding disk, 200 mm dia., manganese steel
  - 13.1130.23 Movable grinding disk, 200 mm dia., manganese steel
  - 13.2000.08 Fixed grinding disk, 200 mm dia., hardmetal tungsten carbide
  - 13.2010.08 Movable grinding disk, 200 mm dia., hardmetal tungsten carbide
  - 13.2100.27 Fixed grinding disk, 200 mm dia., zirconium oxide¹
  - 13.2110.27 Movable grinding disk, 200 mm dia., zirconium oxide¹

- Accessories for iron-free grinding
  - 13.1090.16 Thorough polymer coating inside of grinding chamber
    (Please note: fixed and movable grinding disks made of zirconium oxide are additionally necessary!) ¹

- Dust exhaust system
  - 43.9050.00 Dust exhaust system, dust category "M" according to DIN EN 60335-2-69 for 230 V/1~, 50-60 Hz, 1000 watt

For continuous operation

**VIBRATING CUP MILL**

**PULVERISSETTE 9**

- Instrument without grinding set
  - 09.5000.00 For 230-240 V/1~, 50-60 Hz, 1200 watt
  - 09.5001.00 For 100-120 V/1~, 50-60 Hz, 1200 watt

- Grinding sets
  - 48.5125.00 Tempered steel, useful volume 250 ml
  - 48.5110.00 Tempered steel, useful volume 100 ml
  - 48.5105.00 Tempered steel, useful volume 50 ml
  - 48.5525.00 Chromium-free steel, useful volume 250 ml
  - 48.5510.00 Chromium-free steel, useful volume 100 ml
  - 48.5505.00 Chromium-free steel, useful volume 50 ml
  - 48.5225.00 Hardmetal tungsten carbide, useful volume 250 ml
  - 48.5210.00 Hardmetal tungsten carbide, useful volume 100 ml
  - 48.5205.00 Hardmetal tungsten carbide, useful volume 50 ml
  - 48.5310.00 Agate, useful volume 100 ml
  - 48.5305.00 Agate, useful volume 50 ml
  - 48.5410.00 Zirconium oxide¹, useful volume 100 ml
  - 48.5405.00 Zirconium oxide¹, useful volume 50 ml

- 93.4365.00 Wheels for Vibrating Cup Mill
  (1 set = 4 heavy-duty wheels, 2 with arresting brake)

**PELLET PRESS**

- Instrument incl. pressing tools
  - 09.9500.00 Pellet Press, hydraulic, manual complete with pressing tool for pellets with 40 mm diameter, pressure force 250 kN
  - 09.9600.00 pressing tool for pellets with 32 mm diameter

¹) Grinding disks of zirconium oxide are only suitable for grinding ceramic materials, minerals, etc. and never for hard-tough samples, such as metals.

²) One pack/one piece is included in the order of the exhaust system.
